

# SILVER

## METALLIZATION PROCESS TO OBTAIN THE CHROME EFFECT

Silvering is an ancient process of depositing a layer of mirror silver, by a chemical process of reducing silver nitrate.

Application is by spraying on a hard, shiny base.

The silvering can be varnished, and produces a 100% chrome effect.

StardustColors distributes Jet Metal products (formula R5 and R2 S)

Products offered in complete kits of 25 m<sup>2</sup> or 50 m<sup>2</sup>.
