

CANDY UNDERLAY

The metallic undercoats (BC1, BC2, BC60) are made of aluminum. They are covering, simple and effective. The fine pearlescent undercoats (BC8, BC9, BC11, BC24) offer a more subtle and fine reflection and shimmer. The Diamond undercoats are particularly shimmery.

To obtain a light and bright Candy : use a white undercoat BC4 or BC8.

To obtain a dark and deep Candy : apply more coats of Candy varnish, and use a dark undercoat.

BC1 Bright aluminium

BC2 Coarse aluminium

BC3 Silver diamond

BC4 White diamond

BC5 Gold diamond

BC6 Jade diamond

BC7 Blue diamond

BC8 Mother of pearl

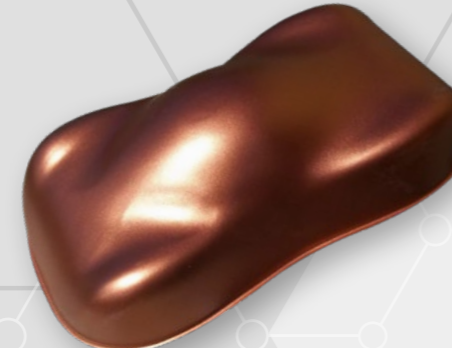

BC9 Silver pearl

BC10 Fine blue pearl

BC11 Fine gold

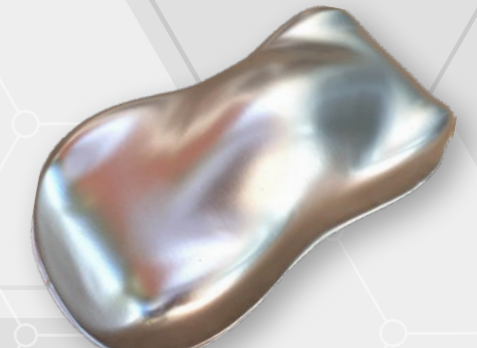

BC12 Copper

BC13 Micro flakes

BC24 Panther black

BC60 Micro aluminium

CANDY

A Candy paint is differentiated by its bright color.
Candy is an intense, perfectly transparent color.

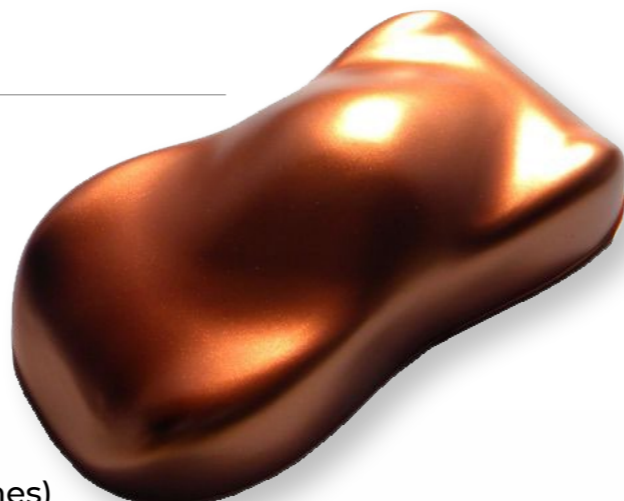

COMBINATIONS

An infinite number of colors are possible by varying :

- The color of the Candy and the number of coats of Candy varnish (the more coats applied, the more intense the shade becomes)
- The color and type of pearlescent/metallic undercoat.

For this we offer a variety of different undercoats, metallic, pearly, glittery, colored...
