

# OPALESCENT DICHROIC PAINTS

## PAINTS WITH COLOR CHANGE EFFECTS

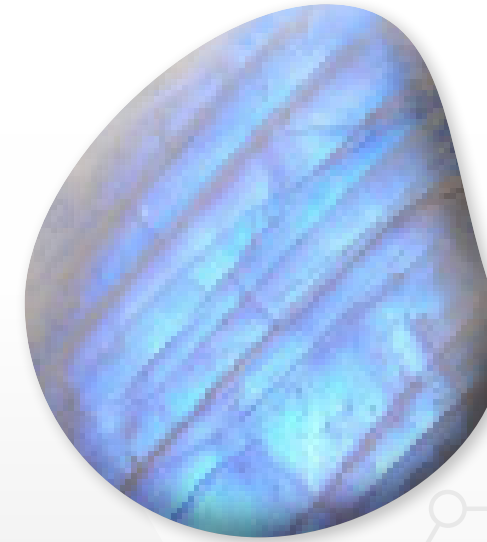

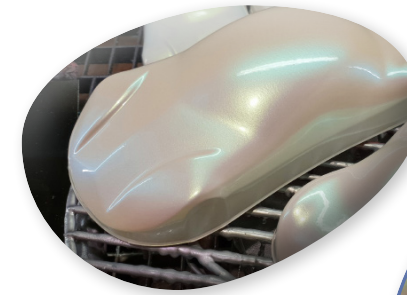

Unique in the world, these paints are **opalescent** and show **iridescent reflections** identical to those of the mother-of-pearl produced by certain shells, or to the colors of certain precious stones and white opals. The 6 shades of the Opal range reveal **a rainbow of subtle reflections**.

### DICHROIC EFFECT :

The product reflects light showing an « electric white metallized » surface and changing bright shades, depending on the viewer's point of view.

### OPALESCENTE SERIES AVAILABLE IN 6 REFERENCES :

		
<b>JASPER</b> OP10030	<b>SPECTROLITE</b> OP10010	<b>ABALONE PEARL</b> OP2150

**AVAILABLE AS :**  
AEROSOL 400ML  
CAN 250ML  
KIT 2L

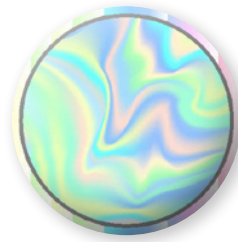

# DICHROIC PAINTS

## OPALESCENT QUASAR

### PAINTS WITH COLOR CHANGE EFFECTS

The **OPAL QUASAR** series represents a range of **superior** quality, with particles slightly larger than conventional OPALS, therefore giving more **iridescent** reflections.  
The **QUASARS** also create more **drastic color changes**.
