

LAVA CRACKS

PAINT

CRACKLE EFFECT

The crackle effect is a simple to make paint, creating an effective and original visual aspect. The implementation is done in two steps, with the application of coat 1 and 2 at intervals of 5 minutes.

MARBLED EFFECTS

MARBLIZER

THE EFFECTS OF MARBLED TEXTURES

The Marblizer paint creates a monochrome contrast with the black background over which it is applied. The Marblizer is clear and reflective, and produces a contrast coupled with a magnificent depth effect with the application of the «Candy» tinted varnish.

MARBLED EFFECTS

MARBLIZER

THE EFFECTS OF MARBLED TEXTURES

Marble effect textures. The Marblizer effect is a paint that is sprayed on with a spray gun, and the surface is modelled by applying and removing a plastic film by hand over the wet layer of product. The paint does not create any embossing or thickness.
