

SPEEDSHAPES

PLASTIC MODELS FOR PAINT SAMPLES

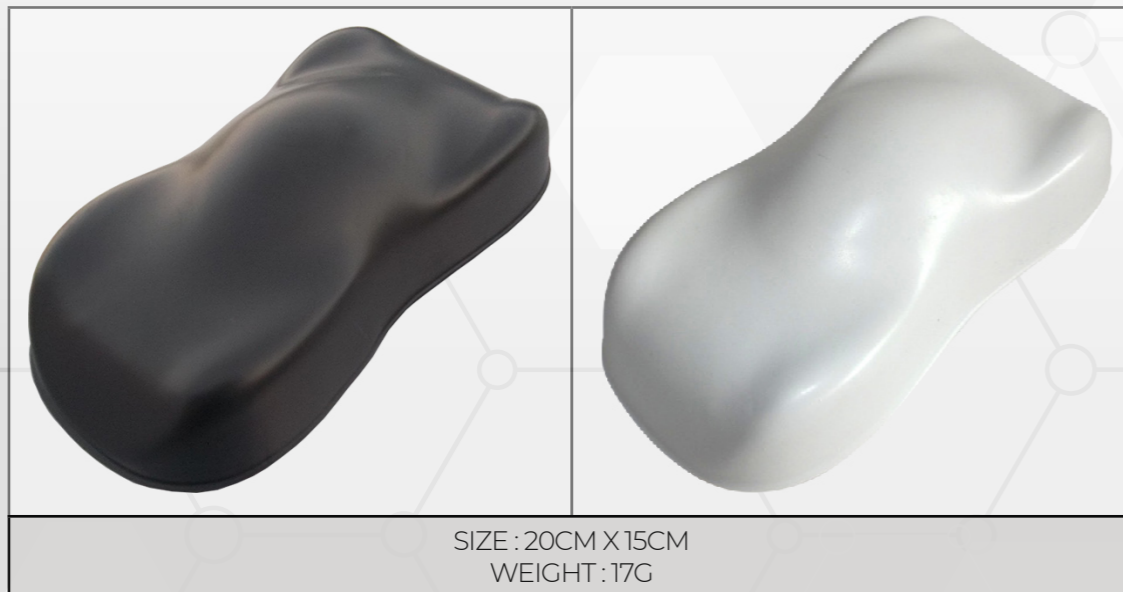

Available in white or black colors, the «speedshapes» are small car-shaped models that serve as demonstration models to be painted.

Speedshapes are suitable for use with water or solvent based automotive paint samples.

Their aerodynamic silhouettes make it possible to show the paint and its reflections from all angles.

STARDUST IS THE MANUFACTURER OF THESE THREE MODELS :

SPEEDSHAPES BASIC

Their PE plastic composition requires no primer.
Their black or white background makes it possible to simulate the primer for various metallic, pearlescent or effect paints.
